

Hello my name is Felipe Reyes Alpizar. I am currently a psychology student at the Mexicali University (UM) on the Playas de Rosarito campus. I study in the Hybrid modality, which means that I have marked days in which I take virtual classes and others in which I take classes in face-to-face manner.

The scholarship represents a great help for me because with it I could pay my monthly tuition, which is handled every month and the fee is 2,400 pesos and also the re-registration fee, which is 1,200 pesos, this would help me meet My goal is to be a good psychologist and to be able to help other people to have a better country.

One of my dreams for the future is to be able to finish my studies and have my own psychological office to be able to pursue my career and thus in turn help people so that they can have excellent mental health and can also function in their daily lives.

One of my greatest passions is to be able to contribute to the improvement of mental health and also to help other people to be better so that they can also help other people and can share the teachings, all this is due to the fact that I passed for a series of events in which I had to experience serious emotional problems and at the time the government institutions did not give me the necessary help, so the recovery time took longer.

One of the people who motivated me to study this career was my psychologist, she gave me a little boost to develop in the area that I like the most, an area in which today I am very good at this thanks to my great quality of speaking and listening.

Speaking a little about this, I can mention that there are two classes that I like the most, which are Learning Theories in which we work on teaching methods in children or young people and the Neuro Anatomy and Physiology class, the latter because it helps me to see the problems in our patients from two different points of view (Psychological and Medical).

---

Mi nombre es Paola Alejandra Martínez Martínez

Estudió la carrera de Ciencias de la Educación en la Universidad Autónoma De Baja California (UABC) escogí esta carrera por qué me llama la atención las formas y métodos que emplean los docentes para enseñar y no solo eso sino entender y estudiar qué factores influyen en el aprendizaje y en su forma de relacionarse con los demás. La beca para mí ha sido una gran ayuda y una bendición gracias a ella puedo seguir estudiando.

Mis sueños a futuro es especializarme en un área que esté relacionada con la salud porque me llama la atención algunos temas que tenga que ver con la medicina; En clase me llama la atención la materia de Desarrollo Humano y Transculturalidad porque

está relacionada con el entorno de los humanos, me emociona la idea de en un futuro trabajar con estudiantes.

Una problemática para mí siento que es el medio de transporte

Estoy muy agradecida por el apoyo de mis Padres y de Becas La Misión CHILDRENS FUND.

My name is Paola Alejandra Martinez Martinez

I study the degree of Educational Sciences at the Autonomous University of Baja California (UABC) I chose this degree because the forms and methods that teachers use to teach call my attention and not only that but also understand and study what factors influence the learning and in their way of relating to others. The scholarship for me has been a great help and a blessing thanks to it I can continue studying.

My future dreams are to specialize in an area that is related to health because some topics that have to do with medicine call my attention; In class, the subject of Human Development and Transculturality catches my attention because it is related to the human environment, I am excited by the idea of working with students in the future.

A problem for me I feel is the means of transport

I am very grateful for the support of my parents and of Becas La Misión CHILDRENS FUND.

Hi everybody, my name is Ángeles Del Rocío Rocha Cuenca and I'm studying architecture at Universidad Xochicalco. Architecture is about design projects like houses, a mall, museum etc. and I choose the career because I like to draw and design. My greatest inspiration always are my parents and my aunts and uncles, they have helped me throughout my career. My favorite course at the university was in photography. We visited some places like a library, a theater, etc. honestly, I don't have too much experience at the university because at the start of my attendance, the pandemic started.

I worked on some projects like a house and a cabin in Valle de Guadalupe and here in La Misión. After graduating, I want to work in an architectural firm, as I want to study a second career which is aerospace engineering, since my passion has always been to work for NASA. The people who have driven me most to go to college are my parents, they have always supported me in each and every decision. Some of my interests and hobbies would be reading, I have read about 25 books since I took it back a year ago. Another hobby is video games and I am very interested in astronomy.

My current project is a Cultural Ensemble. I'm designing a library but I have some problems with the computer that I use because it does not support some programs that I need to do my homework.

Mi nombre es Nathaly Diego Villanueva, soy bombera voluntaria y estoy estudiando biología en la Universidad autónoma de Baja California. Escogí esta carrera porque amo la vida, amo entender cómo es que funciona desde lo atómico hasta lo universal, amo conocer los procesos biológicos y como es que un átomo que es la unidad más pequeña de la materia nos forma y también nos rodea, me causa mucho curiosidad y emoción observar al microscopio células y su comportamiento y pensar en cómo es posible que exista todo eso. Elegí esta carrera porque amo la naturaleza, amo a los animales, el cosmos, por qué conozco la importancia del medio ambiente y también la importancia de conservar nuestra flora y fauna, elegí esta carrera por qué amo la ciencia y sueño con ser científica y bombera forestal la cual relaciona a mi carrera y al área de bomberos, sueño con poder superarme y pronto trabajar en el área de bomberos forestales como bióloga y apagar incendios, ayudar animales y buscar formas de como proteger nuestra flora y fauna y claro nuestra gente de estos incendios, nuestras tierras, deseo poder fomentar educación ambiental y enseñar la importancia de los incendios forestales y cómo podemos prevenirlos ya que es un tema poco tocado e impartido pero sumamente importante ya que cada año aumentan los incendios debido a la contaminación, al desgaste de la capa de ozono y a la educación de la comunidad. Mi pasión son los laboratorios, todos los fenómenos naturales, la naturaleza y todo lo que conlleva como su conservación y también me apasiona ser bombera y mi plan después de graduarme es hacer una maestría y poder dedicarme al área forestal como bióloga y bombera y estoy sumamente agradecida por el apoyo que me dan, son parte fundamental de mi crecimiento profesional.

My name is Nathaly Diego Villanueva, I am a volunteer firefighter and I am studying biology at the Autonomous University of Baja California. I chose this career because I love life, I love understanding how it works from the atomic to the universal, I love learning about biological processes and how an atom, which is the smallest unit of matter, forms us and also surrounds us, it causes me I was very curious and excited to observe cells and their behavior under a microscope and think about how it is possible for all this to exist. I chose this career because I love nature, I love animals, the cosmos, because I know the importance of the environment and also the importance of conserving our flora and fauna, I chose this career because I love science and I dream of being a scientist and a firefighter forestry which relates to my career and the fire department, I dream of being able to improve myself and soon work in the forest fire department as a biologist and put out fires, help animals and find ways to protect our flora and fauna and of course our people from these fires, our lands, I want to be able to promote environmental education and teach the importance of forest fires and how we can prevent them since it is a fire rarely touched and taught but extremely important since fires increase every year due to pollution, wear and tear of the ozone layer and community education. My passion is laboratories, all natural phenomena, nature and everything that goes with it such as its conservation and I am also passionate about being a firefighter and my plan after graduating is to do a master's degree and be able to dedicate myself to the forestry area as a biologist and firefighter and I am extremely grateful for the support they give me, they are a fundamental part of my professional growth.
